METHODS FOR DETERMINING ADHESION OF
POLYMERS TO GLASS FIBER SURFACES. [1963] 8p
10 refs
Order from OTS, SLA, or ETC \$1.10 TT-64-10686

Trans. of Zhurnal Fizicheskoi Khimii (USSR)
1963, v. 37 [no. 1] p. 237-241. (Abstract available)

DESCRIPTORS: *Surfaces, *Glass textiles, Polymers,
*Adhesion, Polyester plastics, Resins, Binders,
Fibers (Synthetic), Adhesives.

Two methods were developed for the direct determina-
tion of the adhesion of polymeric binders to glass fila-
ments. The methods are based on measurement of dis-
placement force of glass filament with respect to the
film of polymerized binder and on determination of the
contact area between the resin and filament. One of the

Tekhnol[ogiya] Legkoy Prom[yshlennosti] (USSR) 1960,
no. 1(14) p. 105-110.

DESCRIPTORS: *Threads. Tensile properties

Each construction of the disk-like thread-tensioning device has, for a given type of thread, a certain velocity limit μ of the thread passing through the device. The thread movement through the tensioning device with a velocity higher than μ causes a rapid increase in the breakage frequency, whereby the thread breaks probably in places where it is not technologically necessary. By reducing the mass of those parts of the tensioning device, which are driven by the thread, it is possible to improve considerably the performance of the device and (Materials--Textiles, TT. v. 6, no. 3) (over)

Trans. of Sprechaal (Germany) 1933, v. 66,
p. 573-574, 591-594.

DESCRIPTORS: *Refractory materials, *Brick, *Chlo-
rides, Salts, *Vapors, Tests.

A test arrangement is described for testing fireproof
bricks as to their resistance to dry and wet alkali chlo-
ride vapors and the results found in these tests with
various sorts of bricks are given. The behavior of the
various sorts of bricks is evaluated on the basis of
microscopic tests as to appearance, vitrification,
changes in volume as well as of microscopic compari-
sons of the original samples with the samples changed
(Materials--Refractories, TT, v. 10, no. 3) (over)
